

Jonathon Zudell

Niceville, FL | 828-772-6130 | jon@zudell.io | zudell.io | [LinkedIn](#) | [GitHub](#)

Full Stack Engineer | DevOps Engineer

DevOps and Full Stack Engineer with 13 years of experience leading cloud infrastructure optimization and secure CI/CD pipeline development. Proven record of reducing deployment errors by 50% and mentoring teams to deliver scalable, efficient solutions.

Key Skills

Languages: Python, TypeScript/JavaScript, Java, bash, sql, hcl

Technologies: Terraform, AWS, Docker, Argo, Kubernetes, PostgreSQL, Flask, Next.js, FastAPI

Specializations: Full Stack Development, Continuous Integration/Continuous Deployment, Public Key Infrastructure, Authentication

Professional Experience

Lark Technologies

2021-12 – 2024-03

Platform Engineer

- Migrated CI/CD process from GitHub Actions to ArgoCD/Argo Workflows for improved efficiency for 30 scalable microservices
- Enhanced pipeline security by implementing Static Code Analysis, resolving build vulnerabilities, while ensuring pipeline availability
- Automated Scanning and remediation critical resources using AWS Config Rules; remediated hundreds of resources on noncompliance
- Optimized JWT token management, deployment errors reduced by 50% and uninterrupted development operations ensured
- Mentored junior engineers on CI pipelines, fostering a culture of knowledge sharing and enabling scalable cloud automation via GitOps

Leidos

2018-06 – 2020-03

DevOps Engineer

- Automated AWS provisioning for 200 servers, improving orchestration efficiency using Chef scripts across 10 accounts.
- Remediated 244 OS Hardening line items for RHEL7 across hundreds of servers; leveraged InSpec and oscap; configured observability

Lockheed Martin

2017-03 – 2018-03

Software Engineer

- Replaced a 10,000 line Java program with 250 lines of python by leveraging native Linux libraries enabling user session management
- Architected client server communication process for Air Space Defense System for the largest ever RHEL7 deployment for the U.A.E.

United States Air Force

2011-01 – 2017-01

Software Engineer

- Wrote procedures to ingest/quality check about 4 million lightning strike and weather observations per day in Java and Python
- Implemented software processes saving 2,479 man-hours per year through error correction automating reducing error rate by 98%

Side Projects

Fugue State

2020-12 – Present

Full Stack Engineer

- Architected a scalable music transcription app showcasing expertise in digital signal processing and cloud infrastructure
- Built CI/CD pipelines with ArgoCD and Terraform, automating infrastructure provisioning for enhanced deployment efficiency
- Secured API communication with automated TLS certificate provisioning using mTLS, lets encrypt, and cert bot

zudell.io

2024-09 – Present

Full Stack Engineer

- Developed a React-based blog highlighting security and engineering practices; implemented dynamic routing and SSG framework.
- Deployed application to AWS using an s3 bucket as a static website. Leveraged Route53, Cloudfront, API Gateway and AWS Lambdas

Education

Northwest Florida State College

Expected in March 2025

AA General Studies

- Mentored Young Cyber Security Club members with real world practical experience, lectured on contents of Hak5 red team bag. Provided copies of RTFM and PTFM pen testing books enabling first place win in statewide cyber security competition.
